RE: Upgrading DNCPro from 5.0x to 6.0x

- 1). All DNCPro applications need to be closed on the Server and all clients before running the upgrade.
- 2). Run the installation program from the CD. If Auto-run is disabled, the Installation program (DNCPRO_Server.exe) is found under the DNCProfessional folder.

You must have local Admin rights to run the upgrade.

See the DNCPro 6.0x Server installation using MS-Access Database.doc located on the CD for detailed instructions.

- 3). Install the DNCPro software. After installation is complete, restart the Server/PC.
- 4). Once the installation is complete, using the DNCPro 6.0x CD, browse to the Update folder. Start the UpgradeDriver application.

This application will check the version of DNCPro that was running before the upgrade. It will then step thru each update. You will need to manually respond to each step of the update. Once the database updates are finished, it will automatically convert the Dbase IV files to MS Access.

- 5). Restart the PC/Server to complete the update.
- 6). After restarting the PC, you will need to modify the default editor setting in Configurator to use the new BTS Editor, see below:
 - A). In Configurator, click on the System tab.
 - B). On the system tab, at the lower left, click on the Tool & Doc Types.
 - C). When Tools32 opens, select Configurator, then choose Tools.
 - D). High-light the Cimnedit 32 line and delete it.

- E). Click on Add.
- F). For the Command Line, enter BTSEdit2010.exe
- G). For Menu Text, enter BTS Editor
- H). For Arguments, enter %FA
- I). Click on OK.

See below:

Dialog box titled "Add/Edit Tools" showing configuration for a tool:

- Command Line: BTSEdit2010.exe
- Menu Text: BTS Editor
- Arguments: %FA
- Working Dir: (empty)

Buttons: OK, Cancel

- J). Then, you will need to modify the Documents:
- K). At the main Tools32 Configuration screen, click on Configure, then choose Documents.,
- L). High-Light Type P, and click on Edit.
- M). For the Editor, change the Editor by using the pull-down arrow and select BTS Editor.
- N). Click on OK.
- O). Repeat steps L, M, and N above steps for Type T.

See below:

Dialog box titled "Add/Edit Document Types" showing configuration for a document type:

- Type: P
- Description: Part Program
- Editor: BTS Editor
- Edit Level: 1
- Downloadable? Download Level: 1
- Viewer: ViewText

Buttons: OK, Cancel

- 6). **If running DNCPro on any workstations, you will need to run the client\setup program on each client. This update is found in the DNCPro\ClientD directory. Start the Setup.exe program.**

See the Workstation installation using MS-Access Database.doc located on the CD for detailed instructions.
